'Personal Data' Definition: IP-Address? / 'Pseudonimized Data'?

An IPv4 address (dotted-decimal notation)

172 . 16 . 254 . 1

10101100 . 00010000 . 11111110 . 00000001

One byte = Eight bits

Thirty-two bits (4 x 8), or 4 bytes

An IPv4 address (dotted-decimal notation)

172 . 16 . 2 

10101100 . 00010000 . 11111110 . 00000001

One byte = Eight bits

Thirty-two bits (4 x 8), or 4 bytes

Two Claims to Internet ‘Security’ ‘Technical’ and ‘Political’

Where computer security meets national security¹

Helen Nissenbaum

Department of Culture and Communication, New York University, NY, USA

E-mail: helen.nissenbaum@nyu.edu

Abstract. This paper identifies two conceptions of security in contemporary concerns over the vulnerability of computers and networks to hostile attack. One is derived from individual-focused conceptions of computer security developed in computer science and engineering. The other is informed by the concerns of national security agencies of government as well as those of corporate intellectual property owners. A comparative evaluation of these two conceptions utilizes the theoretical construct of “securitization,” developed by the Copenhagen School of International Relations.

Key words: cyber-security, computer security, securitization

'Technical Security': c.i.a. Triad

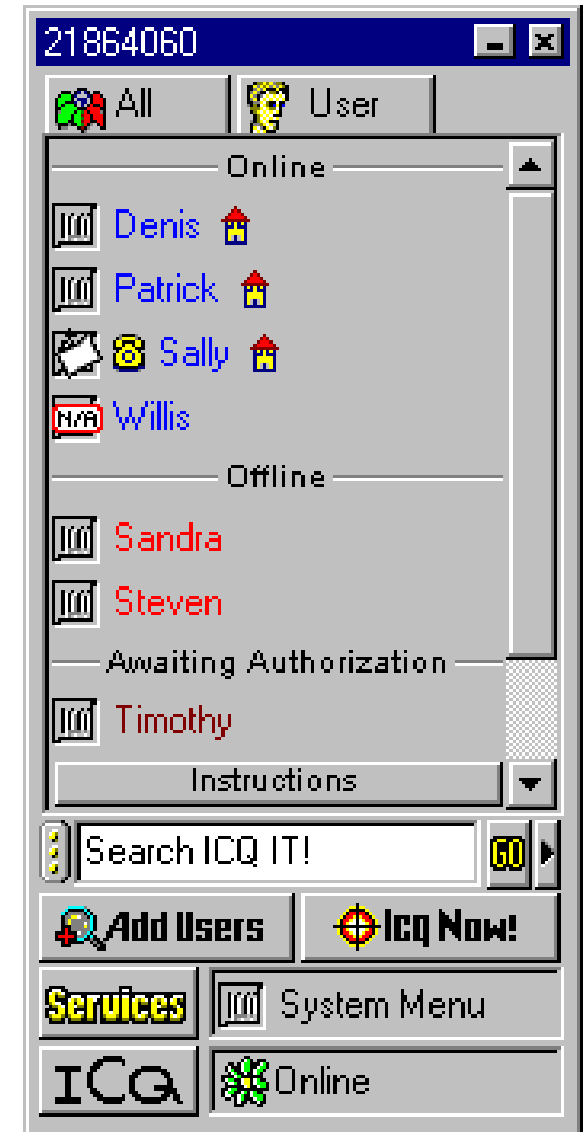

McCumber Cube (1991)

Calls to Expand into Information Assurance – Cherdantseva et al. (2013)

So 90's:

Tech Change
Crypto Wars
IP Wars

'Political Security': Cybersecurity As a National Security Issue

Cybersecurity Securitization:

1. Urgent, imminent, existential **threat**
2. To a significant **collective**
3. By an accepted, powerful **agent**

Cybersecurity Securitization: Trojan Horse for Exploitation

“CYBER-SECURITY” AND THE CYBER THREAT

James Baker, former senior DOJ official on FISA:

“Let me repeat that: there are arguments that in order to defend ourselves, the government needs to be able to monitor all Internet communications. All of them. Is this possible, even if it is necessary? Maybe. The key limiting factors are money and access. And you would need lots of both.”

13 Sep '13, Constitution Day address, Dickinson College

Policy: 40 Years of (E.U.) 'Security' Concepts

Research Agenda For Internet Security Policy

E.U. 'Security' Concepts: 5 Cycles Analyzed Definition & Scope

- 1. Data Protection**
- 2. Telecommunications Law**
- 3. Encryption: Signatures & Certificates**
- 4. Cybercrime**
- 5. 'Network & Information Security'**

E.U. ‘Security’ Concepts: National Security? Member States!

Threat:

**E.U. Council / States Re-framing
into National Security Issue**

Opportunity:

**Focus on c.i.a.-Triad, Rather than
“Cyber-Security”.
Internet Security For Everyone;**

Definition Status Quo: Patchwork of Protection

	<i>Confidentiality</i>	<i>Integrity</i>	<i>Availability</i>
<i>Data Protection</i>	Personal data, may include network	Personal data, may include network	Personal data, may include network*
<i>Telecoms Package</i>	communications and information**	unclear, probably only personal data	priority issue, but phrased as 'integrity'
<i>Encryption</i>	undefined, linked to data protection	undefined, prioritized in Annexes	undefined, not covered
<i>Cybercrime</i>	undefined, but covered	undefined, but covered	undefined, but covered
<i>"NIS"</i>	yes, proposed Directive	adds 'authenticity', proposed Directive	yes, proposed Directive

Definition Status Quo: Patchwork of Protection

	<i>Confidentiality</i>	<i>Integrity</i>	<i>Availability</i>
<i>Data Protection</i>	Personal data, may include network	Personal data, may include network	Personal data, may include network*
<i>Telecoms Package</i>	communications and information**	unclear, probably only personal data	priority issue, but phrased as 'integrity'
<i>Encryption</i>	undefined, linked to data protection	undefined, prioritized in Annexes	undefined, not covered
<i>Cybercrime</i>	undefined, but covered	undefined, but covered	undefined, but covered
<i>"NIS"</i>	yes, proposed Directive	adds 'authenticity', proposed Directive	yes, proposed Directive

Scope Status Quo: Laws Focus on Actor, rather than Function

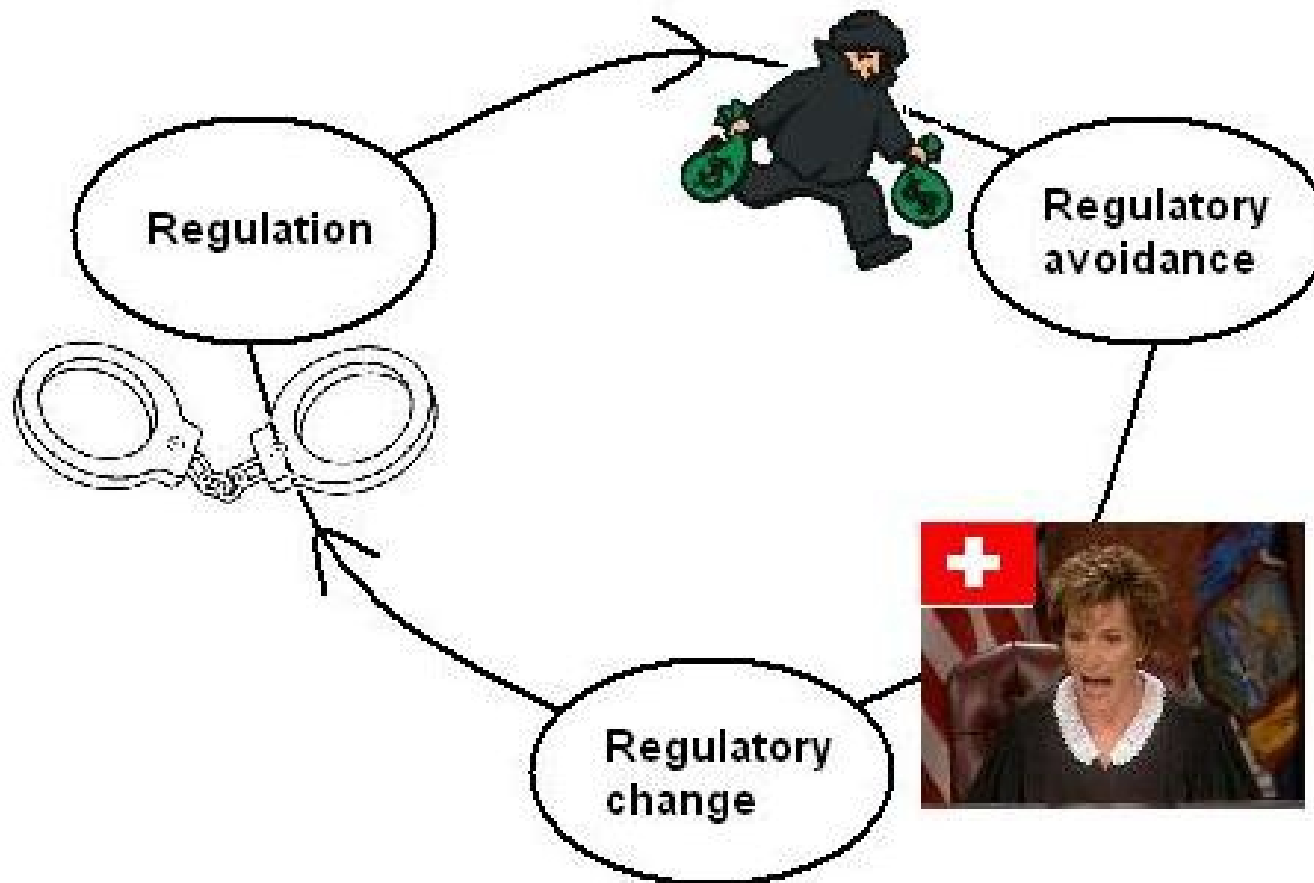

at&t

regulated

Tech Turbulence Exacerbates Flawed Actor-Approach

Why Interested in Concepts?

Two Claims: 'Technical' & 'Political' Security

Policy: 40 Years of (E.U.) 'Security' Concepts

Research Agenda For Internet Security Policy

The Major Research Question: A Directive for Internet Security?

Research Questions:

1. Computer Science
2. Political Science
3. Constitutional, European Law

Technical Research Q's:

1. How timeless is the c.i.a.-Triad?
2. Security Requirements Engineering for Policy?
3. Is security a technical, or economic problem: empirical case studies on incentives?

Example:

Security Economics in the HTTPS Value Chain, with H. Asghari, M.J.G. van Eeten & N.A.N.M. van Eijk, Workshop on the Economics of Information Security 2013, 3 June 2013

Incentives: Internet markets tend towards 'winner take all'

One of many examples:

- HTTPS market
- 3 CAs sell 75% certs
- 5 CAs sell 90% certs
- For top 1k, top 100k and top 1m domains

• Across web, similar market dynamics

With H. Asghari, M. van Eeten & N. van Eijk (WEIS 2013)

Market Shares**

ROOT CAUSES OF CYBERCRIME? GAME THEORY: LARGE SCALE VULNS

Where Do All The Attacks Go?

Dinei Florêncio and Cormac Herley

Microsoft Research

One Microsoft Way

Redmond, WA, USA

“Many attacks cannot be made profitable, even when many profitable targets exist.”

Political Science Research Q's:

1. Call it 'security'? Or assurance, robustness?
2. Why subjective trumps objective security?
3. Securitization and regulatory capture?
4. Why deterrence opted over actual protection?

Chapter 3 thesis... Input more than welcome!

“We Must Do Something.
This Is Something.
Therefore, We Must Do It”

Re-framing Major Shifts Human Organization as Security Threat

“Transfer of Anxiety”
Bauman (1998)

5M. SECURITY CLEARANCE, 2 STAFF:
~15M OF 136M US WORKFORCE!

Here's the official Data, but nothing on national security:
<http://www.bls.gov/news.release/empsit.t17.htm>

Constitutional, European Law Research Q's:

1. Constitutional elements of confidentiality, integrity and availability?
2. Constitutional Right to IT-Security?
3. Post-Lisbon Treaty, more leverage to secure the internet at the E.U. level?

CONSTITUTIONAL COURT GERMANY

HUMAN RIGHT IT-SECURITY: AGAINST COMPANIES?
